

Team Contract Template¹

Group Number: 11

Group Member Names: Jack, Anthony, Andrea

These are the terms of group conduct and cooperation that we agree on as a team.

Group Target Grade: What grade is the group aiming for on the projects?

50-59%

60-69%

70-79%

80-89%

90-100% ← THIS ONE

Is that a consensus? If members are aiming at different grades, work it out now and record what you agreed: what standard of work you will hold each other to, and roughly how many hours each member expects to put in per week. Groups run into trouble far more often over unequal effort than over different ambitions.

We agree to...

Each put in however many hours it takes to complete the requirements for our goal

Grade, which we have reached consensus over. We acknowledge that it may take

More or less time for certain tasks and will help split the workload accordingly.

¹ Teamwork guidelines are from Teamwork Contract Template by George Brown College.

Rules for Participation:

Team members need to contribute fully to the best of their ability. Members need to take initiative in participating in the group tasks, especially in areas where they may have strengths. Those with greater ability may also need to help those who may be struggling by guiding, coaching or critiquing. Those who may be struggling should be clear when they need clarification or assistance. To make teams work well, members need to make concerted efforts to be available for meetings. Wanting the group to succeed will contribute to success – begrudging contributions will erode success.

We agree to....

Find a meeting time at least once a week in which it is convenient for all group

Members in order to discuss what needs to be done and when, as well as

properly dividing and assigning work.

Communication and Conduct:

For effective teamwork to occur there needs to be a free, open and appropriate expression of ideas and feelings at all times. Each member actively listens to other members, and after listening, provides effective non-judgmental feedback. Members take responsibility to communicate their ideas, thoughts, concerns, etc. Respectful communication (verbal and non-verbal) in response to cultural and personal differences contributes to team cohesion.

We agree to...

We agree to consistently, and openly communicate appropriately with each other,

As well as ensure that all team members' standards are met. We also agree to

Treat each other with respect and mindfulness and provide a good environment

For each member.

Organization and Meetings:

An effective team needs to be organized. Members determine how the team is organized. This in turn, contributes to a member understanding their responsibilities, ensuring things are getting done and that there is no repetition in completing tasks.

We agree to....

Clearly assign work and equally contribute to the development of the project.

We will also ensure things are done in a timely manner and be flexible.

(because life can happen)

Code Sharing and Version Control:

A team needs one agreed place where the project code lives, and one agreed way of getting changes into it. Passing files by email or messaging app works until the week it does not, and a team that discovers on the last evening that two members have been editing different copies loses work it cannot recover. A version control system solves this, and a guide to using Git for this course is posted on D2L. Beyond keeping the code safe, a repository is a record of who contributed what and when. Teams are not required to use Git, but a team that uses it has evidence of its own work, which is useful to the team and to the instructor if questions arise later.

- **Where the code will live (repository URL, if using Git)**
- **Who set it up, and confirmation that every member has access**
- **How often members will commit and push their work**

We agree to...

Use github and push our changes as frequently as possible to ensure that nothing

Is lost. We have agreed for Jack to create the repository.

Contribution History

The group grants the instructor access to the repository when it is created. If the group is not using Git, the group keeps a record of contributions in a Google document shared with the instructor. The record of contributions must briefly describe the changes made and identify the team members contributing to the changes. The records must be updated on the day the work is done.

We agree to...

Use github in order to track contributions.

each team member will push contributions with respective commit messages.

Assessment and Conflict Resolution:

A well running team is always interested in how things are going and is willing to make changes when something is not working. Members of an effective team will contribute to an attitude of action and momentum. Often, progress is a good indicator of how well the team is working together. Regular assessment is necessary for a team to ensure it is continuing to work well together. Most often what needs attention is that a member has fallen behind, and the cause is rarely bad faith. Silence is the real difficulty rather than the delay. Agree on how you will check in on how the group is doing and how often, and on what you will do if a member falls behind: how soon they are expected to say so, how you will help, and at what point you will raise it with the instructor.

We agree to...

We will do consistent checkups throughout the week on each group member,

Making sure that what was asked of them is achievable and moves properly with

The timeline. We will also talk frequently in the groupchat and let each other

Know if anything arises.
